Panic Station Game Aid

Welcome to the station Recon-6. Your mission is to locate the parasite hive and destroy it. But beware, one of your team members has been infected and now stalks you as its prey. Welcome to Panic Station.

Setup

Each player receives their character cards, tokens, Infection cards, and scan check cards.

Let X = # of players. Shuffle X gas can cards, the Host card, and 2X-1 random Search cards. Place on top of deck then deal 2 to each player. Shuffle antidote card into 2nd half of search deck.

Place the Reactor Room in the middle of the table. Shuffle the Open Computer Terminal into the 2nd half of the room deck. Shuffle the Hive into the bottom 3 cards of the room deck.

Game End

The humans win if an uninfected Trooper plays 3 Gas Can cards in the Hive room (1 AP) to burn it. The Host and other infected players win if all humans are infected, if all uninfected Troopers are killed, or if too few Gas Cans remain.

Miscellaneous Rules

- Minimum hand limit of 5 cards
- All players must search in first round if possible
- The Reactor Room is a no-trade zone (optional: only enforce for first round)
- The Host card may be traded if the Host runs out of Infection cards
- Androids carry a basic gun by default
- Troopers can only attack with the knife or grenade
- Throwing a grenade before moving into a room will prevent a forced trade in that room
- One Armor can protect both of your characters if they are in the same room
- Automatic heat scan when the Hive is placed
- Black parasites that take only 1 wound are replaced by Gray ones, if available
- A room with no legal placement anywhere is placed under the room deck
- Two security doors cannot be placed side-by-side

1. Parasite Phase

The player with the Parasite Marker completes this phase and then passes the Marker to the left. Opened doors are now closed. Roll the D4 and move all parasites in that direction if possible. Parasites attack all characters in their room. Grays deal 1 damage, blacks deal 2 damage.

2. Team Phase / Player Turn

Trooper + Android health → Total Action Points (AP)

- **Move:** 1 AP to move to an adjacent room
  –must trade (0 AP) or attack (1 AP) on entering
- **Explore:** 1 AP to add an adjacent room
- **Search:** 1 AP to draw card. Flip room to red side.
  –if room is already red, trigger a Parasite Alert
- **Attack:** 1 AP to attack a character/parasite in room
  –black parasites turn to gray, grays are removed
- **Use Item:** 1 AP to use an item on a Search card
- **Activate Room:** 1 AP to use the Computer or Sick Bay

Trading

Players must trade or attack when moving into a new room with another player's character. If there are multiple then choose one person to trade with. Each player secretly trades one card to the other. Your characters get one trade each per room per turn. If you choose to attack to prevent a trade, you may not Team Search in the same room.

Infection

The goal of the Host and other infected players is to infect the remaining humans by successfully trading their Infection cards to them. However this can be counteracted if a gas can or antidote card is received in return. Your Trooper and Android are bio-linked, so if one becomes infected then the other does as well. Uninfected humans may never trade their Infection cards. Once infected, you may trade normal items or choose to trade Infection cards of your own color.
